

# Patients Catalog API – Postman Testing Documentation

The login process and the test automatically save the authentication token in the environment variables for use in future requests.

Review the basic patient list (default mode) without activating any search or sort filters in the request link (URL).

Cardiac Monitor - Sprint 1 Day 5 Demo > 02 - Browse filtered, sorted, paginated catalog

GET `{{baseUrl}}/api/patients` Send

```

15     "firstName": "Ahmad",
16     "lastName": "Ali",
17     "dateOfBirth": "1998-05-15T00:00:00",
18     "gender": "Male",
19     "contactNumber": "0599123456"
20   },
21   {
22     "id": 15,
23     "userId": null,
24     "firstName": "Ava"

```

A detailed view of the retrieved data structure (JSON format) that shows patient information within the results matrix (items).

```

"items": [
  {
    "id": 1,
    "userId": null,
    "firstName": "Ahmad",
    "lastName": "Amr",
    "dateOfBirth": "1990-05-12T00:00:00",
    "gender": "Male",
    "contactNumber": "+9759835279"
  },
  {
    "id": 8,
    "userId": null,
    "firstName": "Ahmad",
    "lastName": "Ali",
    "dateOfBirth": "1998-05-15T00:00:00",
    "gender": "Male",
    "contactNumber": "0599123456"
  }
]

```

Testing the pagination property by calling only the first page, pageNumber=1.

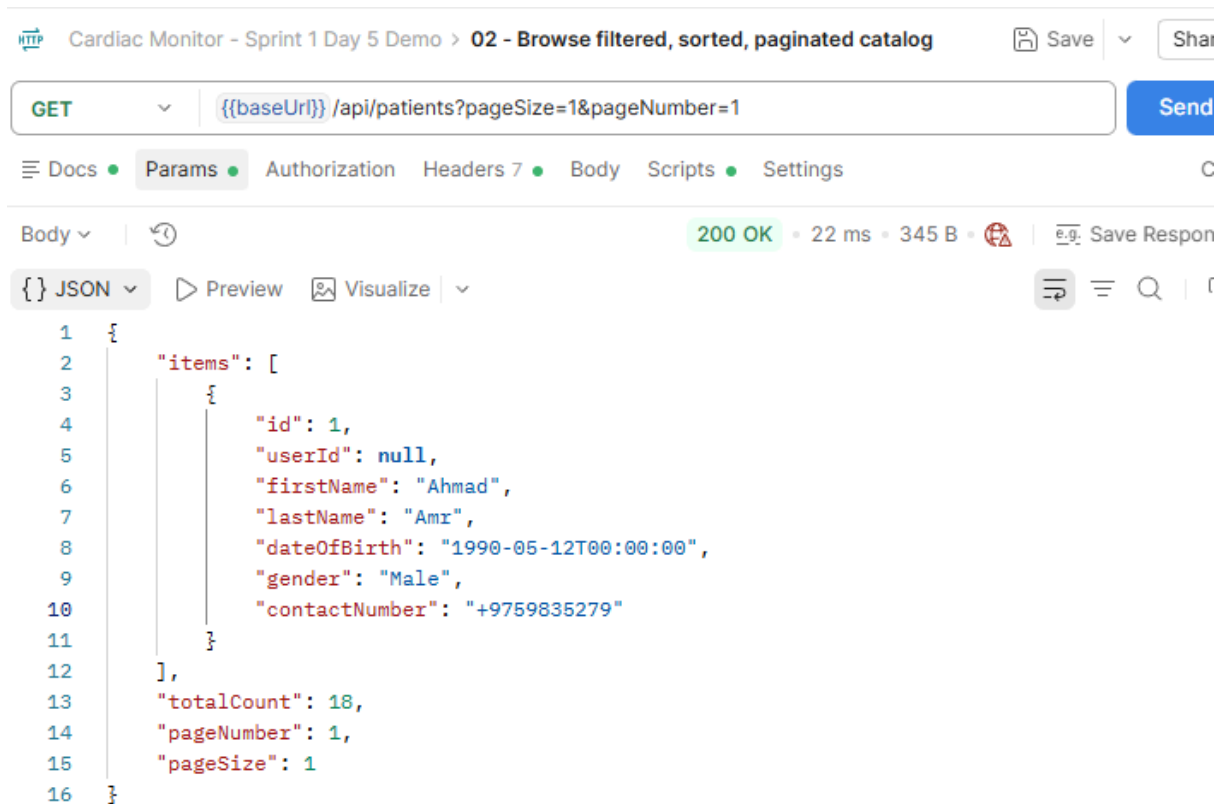

The screenshot shows a Postman interface for a REST client. The request is a GET to `{{baseUrl}}/api/patients?pageNumber=1`. The query parameters table is as follows:

| Key                                   | Value    | Description | Bulk Edit | ... |
|---------------------------------------|----------|-------------|-----------|-----|
| <input type="checkbox"/> pageSize     | 1        |             |           |     |
| <input type="checkbox"/> searchName   | a        |             |           |     |
| <input type="checkbox"/> gender       | Female   |             |           |     |
| <input type="checkbox"/> sortBy       | lastName |             |           |     |
| <input type="checkbox"/> isDescending | true     |             |           |     |

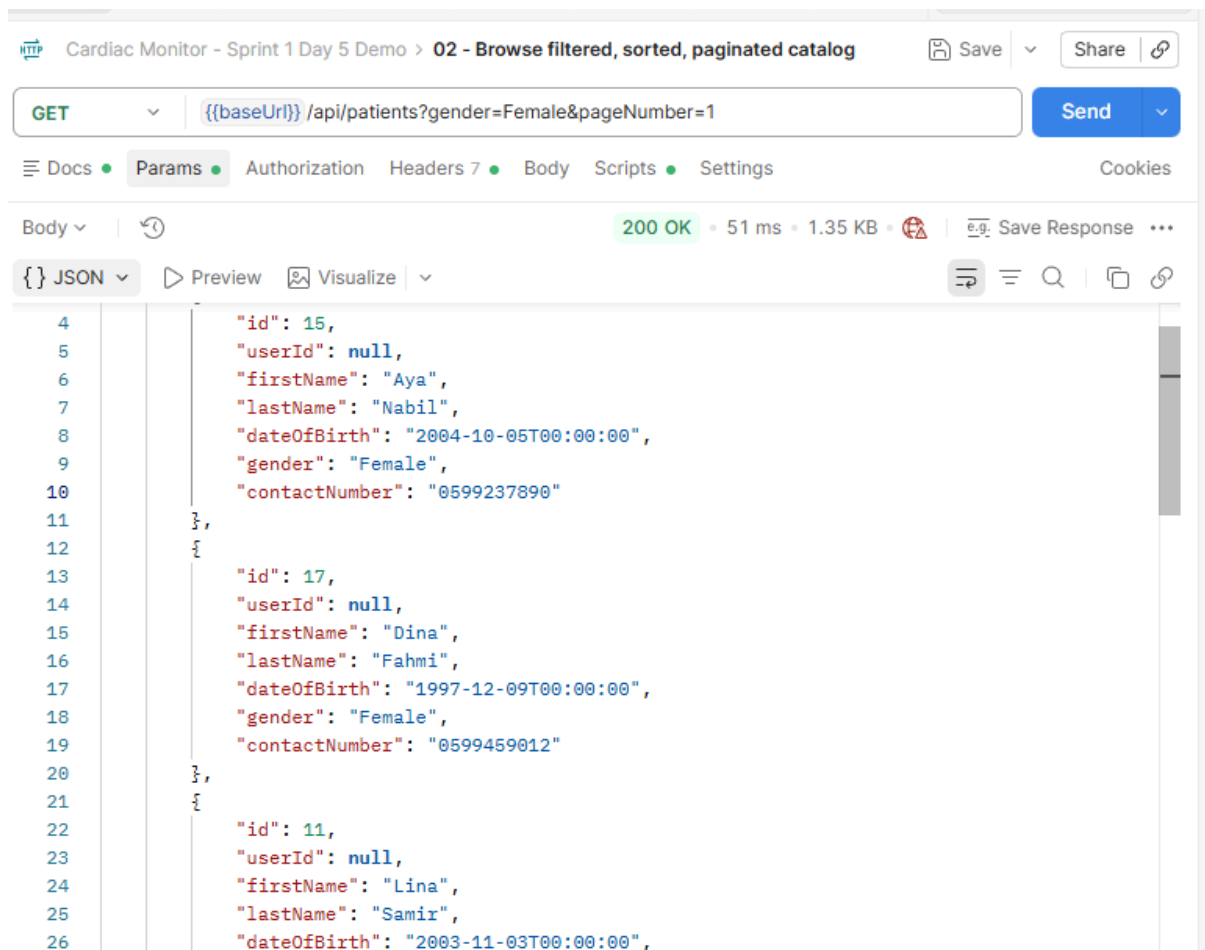

The response is a 200 OK status with a response time of 43 ms and a size of 1.64 KB. The response body is in JSON format:

```
1 {
2   "items": [
3     {
4       "id": 1,
5       "userId": null,
6       "firstName": "Ahmad",
7       "lastName": "Amr",
8       "dateOfBirth": "1990-05-12T00:00:00",
9       "gender": "Male",
10      "contactNumber": "+9759835279"
11    },
12    {
13      "id": 8,
14      "userId": null,
```

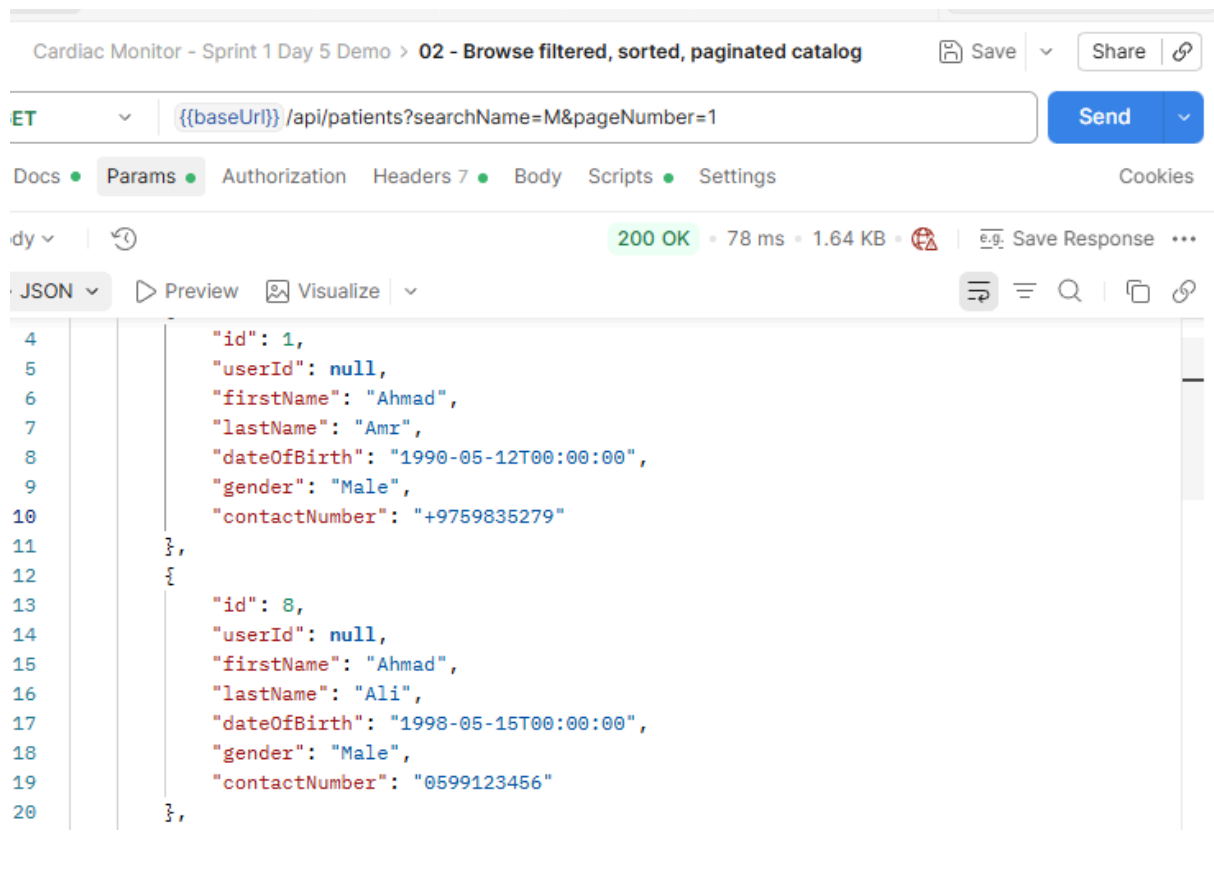

Apply the pageSize=1 feature to display only one patient, with the numbering statistics (total number and page size) shown below the results.

Testing data filtering by gender (gender=Female) to display only female patients on the first page.

Testing the search by name property searchName=M to retrieve patients whose names contain this letter.

Testing the `sortBy=firstName` property to sort the list of patients based on their first name.

★ Fix failing pageSize assertion

Testing the reversal of the order to become a descending order using the parameter `isDescending=true`.

A comprehensive, multi-factor test that combines several factors into one request: (display 3 results per page `pageSize=3`, gender male `gender=Male`, and descending order `isDescending=true`).
